Instrument List:

- [Green](#)

Discussion:

All six 2DVDs should now be operating and collecting data. Major optical adjustments were performed today for SN36. The problem with SN38 seems to have been corrected. Data collection for SN25 cannot be verified as it has not been visited since deployment.

Each unit still requires calibration. This will be attempted for a couple units on Monday, weather dependent.

Progress has been made on the cellular modems. Data flow and remote communications should be possible next week.
