Instrument List:

- [Yellow](#)

Discussion:

APUs 09-14 were visited yesterday and updated to a new GPS time sync program. This program will update the clock every hour when no precip is occurring. Clock changes are logged as well. This program also makes sure the Parsivel data collection program is running properly.

The rest of the APUs will try to be visited today and given this update.

APU12's solar panel and tipping bucket (one false tip) were moved closer and to the S of the enclosure by request of the landowner.
