Instrument List:

- [Green](#)

Discussion:

The D3R radar is operating well. We have a storm event last night that was moving from Southwest to the radar site. The storm moved into the D3R range (40 km) around 01:46UTC. It moved out of the range around 04:30UTC. D3R has collected lots of good data including the 140 deg PPI, 30 deg PPI, and RHI over the 130.4 deg azimuth. Another productive night !

The data backup is also being done.
