### Instrument List:

- [Green](#)

Discussion:

NPOL encountered no issues that might affect the data. "Once in a career" dataset collected in conjunction with D3R over the 05/01-05/04 period, with rain, sleet and snow, as well as some shallow convection Saturday afternoon. Unfortunately, D3R is down after HVAC motor failure, but we were able to get an HVAC company out there quickly to diagnose the problem and they will bring a new motor some time Monday morning. Fortunately, J. Hardin had backed up all of the moment data, but it appears that the IQ (time series) data was lost. Will shift NPOL product generation to WFF1 today as GPM2 is being used for VCHILL and other uses.

Real-time NPOL images are available at:
