

Mission Scientist Report for Tuesday, 4 June 2013

Submitted by tjang on Tue, 06/04/2013 - 09:33

Date:

Tuesday, June 4, 2013 - 09:30

Discussion:

NPOL and D3R are green. XPOLs 2-4 are green. XPOL 5 is yellow but will be placed back into operation soon. Disdrometers and other surface instrumentation are mostly green. SN25 was re-calibrated yesterday, but calibrations for other sites were found to be stable. The APU07 computer was damaged by a flash flood event and so the instrument is red for the remainder of the campaign.

Little precip occurred in the IFloodS domain yesterday. Early this morning, a mostly stratiform rain system with some leading convection has moved thru our domain and has overrun the NPOL/D3R site. Coordinated scanning continues on this event.
