

## Plan of the Day for Thursday, 30 May

Submitted by tjlang on Thu, 05/30/2013 - 10:26

Date:

Thursday, May 30, 2013 - 10:15

Discussion:

All IFloodS instrumentation is available today for what appears to be another busy day with heavy rain and possible severe weather expected by early this afternoon. The main vehicle of this should be a large MCS, an event qualitatively similar to yesterday's. GOES rapid scanning will be requested for 12 hours starting at 12:30 pm local today, although due to short notice it is uncertain this will be authorized. NPOL is undergoing tests and maintenance this morning but is available for whenever the weather arrives. Other instrumentation with minor issues noted in the Mission Scientist's report (XPOLs, disdrometers/gauges, etc.) also are expected to be available today. D3R is green.
