

## Plan of the Day for Wednesday, 5 June 2013

Submitted by tjang on Wed, 06/05/2013 - 10:42

Date:

Wednesday, June 5, 2013 - 10:15

Discussion:

All IFloodS instrumentation is green. Today we expect another significant round of showers and thunderstorms lasting throughout much of the 24-h period. NPOL and D3R will concentrate on obtaining long periods of vertically pointing data as long as precip occurs at the radar site, with NPOL still doing its obligatory rain mapping every 3 min.
