- [Met One Rain Gauge Pairs](#)

Flight Date:

Thursday, April 21, 2011

Status:

Green

All 16 tipping bucket gauge pairs are now installed at the APU sites and collecting data. The final gauge pair was installed today for APU 13. The CS data logger program was modified for sites with GSFC tipping buckets. The gauge data is available near real-time (one minute resolution) via remote wireless communications. Light rain fell today across the entire network.
