

# Real-Time Images on-line

Submitted by wpetersen on Mon, 04/11/2011 - 12:31

- [S/UHF Profiler](#)

Flight Date:

Friday, April 22, 2011

Status:

Green

The S-band (2.835 GHz) and UHF (449 MHz) profilers were installed at the SPG Central Facility the week of 4 April. Data collected since 8 April will be available in the archive.

As of 22 April, real-time quick-look images are available via the web and ftp.

Web page: <http://www.esrl.noaa.gov/psd/data/obs/>

Click on the green dots by 'Lamont (3GHz)' and 'Lamont' for the latest image. Images are generated every hour, show the SNR without any quality control and time is plotted from right-to-left.

The current image (without a time stamp) and all previously generated quick-look images are stored in two ftp directories:

(S-band) <ftp://ftp.etl.noaa.gov/psd2/data/realtime/Radar3000/Images/lmc/>

(449-MHz) <ftp://ftp.etl.noaa.gov/psd2/data/realtime/Radar449/Images/lmt/>
