

# Outlook for Saturday, 21 May 2011

Submitted by srutledge on Fri, 05/20/2011 - 15:16

Date:

Sat, 05/21/2011

We have asked the ER-2 for a 1900 Z take off on Saturday, 21 May 2011. Expect a land surface mission in (temporal) proximity to AQUA satellite overpass, here in Oklahoma. This will (hopefully) be followed by overflights of developing convection. UND Citaation on standby by for 21 Z takeoff to coordinate with ER-2 for anvil work. We are looking into the possibility of coordinating the MAPIR-carrying aircraft with the ER-2 land surface component. It is not clear at the time of this writing if MAPIR will be ready for a full up mission on Saturday. They may want a shakedown flight that day instead. We are looking into this.
